Working with Fedora Silverblue

Presented by
Michal Konečný
Software Engineer in Fedora Community Platform Team

Working with Fedora Silverblue

1. What is Fedora Silverblue?

2. How it differs from Fedora Workstation?

3. Why should I care about Fedora Silverblue?

4. Live demo

5. Where can I find more?

fedora

What is Fedora Silverblue?

Fedora Silverblue has...

- Atomic updates

- Immutable system
    - except /var and /etc

fedora

How it differs from Fedora Workstation?

How it differs?

- rpm-ostree instead of dnf

- Layering of rpm packages instead of installation

- Flatpak, flatpak everywhere

Why should I care about Fedora Silverblue?

What it offers?

- Stable system

- Easy way to rollback system update

- Secure system?

fedora

Live demo

Where can I find more?

Useful links

- Fedora Silverblue homepage

  https://silverblue.fedoraproject.org/

- Fedora Silverblue documentation

  https://docs.fedoraproject.org/en-US/fedora-silverblue/

- IRC - #silverblue channel on freenode
